

*Charlotte Teague*

*CS 418*

*February 4, 2015*

*Project 1 Status Report*

- 1. I started with downloading and installing XAMPP-win32-5.6.3-0 (version 3.2.1).*
- 2. I had to change the port number from 80 to anything. I chose 1234.*
- 3. I started the XAMPP processes and proceeded to test the installation.*
- 4. I tested a php 'Hello world' file, then opened myPHPAdmin and created a database titled 'cs418'.*
- 5. Within this database, I created 3 tables, so far, titled 'user', 'question', and 'answer'.*
- 6. Within these tables, columns were created.*
- 7. I then added the specified credentials for existing users*
- 8. There is much more detail needed for this database, and edits for the tables.*

*At this point, this is how far I have progressed.*
