Charlotte Teague

CS 418

February 4, 2015

Project 1 Status Report

1. *I started with downloading XAMPP-win32-5.6.3-0.*
2. *I had to change the port number from 80 to anything. I chose 1234.*
3. *I started the XAMPP processes and proceeded to test the installation.*
4. *I tested a php 'Hello world' file, then opened myPHPAdmin and created a database titled 'cs418'.*
5. *Within this database, I created 3 tables, so far, titled 'user', 'question', and 'answer'.*
6. *Within these tables, columns were created.*
7. *There is much more detail needed for this database, and edits for the tables.*

At this point, this is how far I have progressed.
